Thank you james!

Rene, what's the depth on CD-04? Glad things are still going well.

Thanks to all of you for the quick response on the well logs and concentrations in this area, especially James, whom I keep bothering since you all encrypted the data in the Yakima report and I do not have access here to James software which I use at the office to match wells and well logs. Got well CD-04 in and is getting finished as I send this. Moving to CD-09 next and it is only 1230 now (but we have to dismantle the circus tents before we go).

Having been out to Pocatello recently like Monday and Tuesday. I too enjoyed the aroma of the sweet and burning sensation of the "smells" of business. Enjoy your cool days out in the field and I hope James

comes through with the depth of the private well so your drillers can continue with their path of exploration of the groundwater quality.

I will be chained to my desk for today and tomorrow so feel free to call if you need anything and we here in the regional office would enjoy the finer taste of the wine that you may be sampling after your daily work has been completed.

We have been drilling and have three wells in place and starting a fourth. The smells are not like roses and leave something to be desired. Today about 32 and heavy fog. Have yet to see a winery, but next time I will let Curt deal with the dairies and I will concentrate on monitoring the winery circuit.

More when, and if, it happens. Back to boring now......
